

HSK Tightening Fixture

SPN1-HSK40A/63A/100A

Features

Easy to use

To clamp the holder, insert the HSK shank and rotate the knob 90 degrees.

Taper shank will be securely clamped with perfect face contact. Tool chucking can be done without damaging the 1/10 taper face.

Tool length measurement possible

Can be used for tool length presetting

Two different types available

Type SPN1 : with clamp base

Type PH : Holder support only

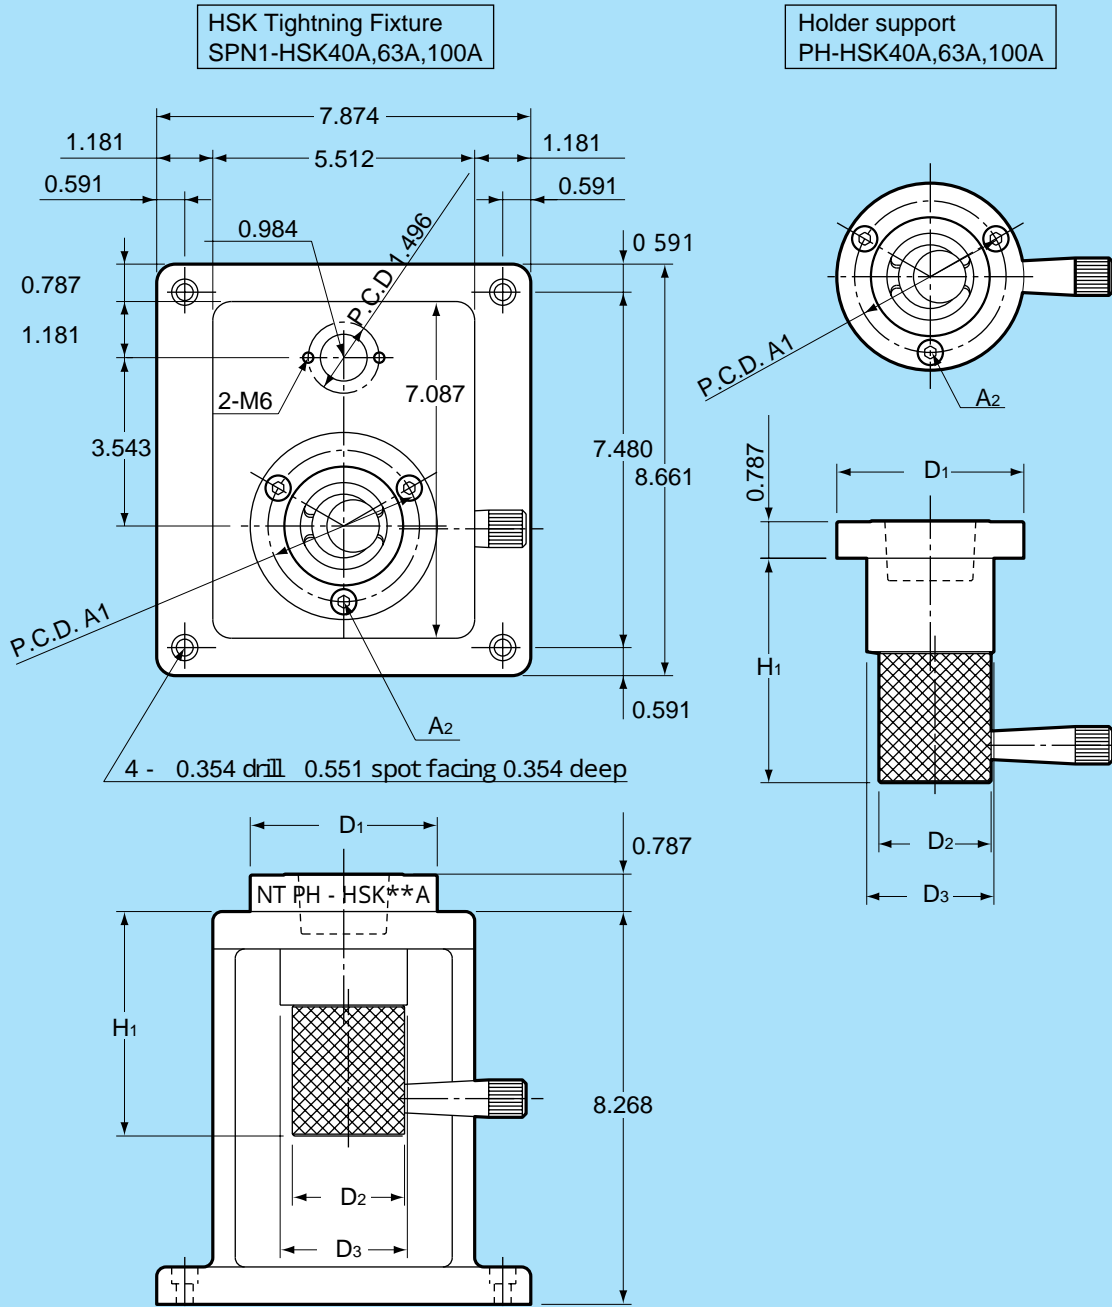

Applications

Suitable for tightening milling chucks or collet chucks.

Tool presetting for length measurement.
